***Election/Restrictions***

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
  - I. Claims 1-5 and 8-11, are drawn to a method and system for detecting buried objects, classified in class 342, subclass 22.
  - II. Claims 6 and 7, are drawn to a method for manufacturing a broadband antenna, classified in class 29, subclass 600.

The inventions are distinct, each from the other because of the following reasons:

2. Inventions II and I are related as process of making and product made. The inventions are distinct if either or both of the following can be shown: (1) that the process as claimed can be used to make other and materially different product or (2) that the product as claimed can be made by another and materially different process (MPEP § 806.05(f)). In the instant case both (1) and (2) are possible because the process as claimed can be used to make a materially different product such as an integrated circuits, and the product as claimed can be made by a materially different process such as etching.

3. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.
